

TOOL-LESS ACCESS COVER AND EMI TIGHT ACCESS DOOR

ABSTRACT

An information handling system case is disclosed which has a chassis suitable for containing an electronic component, an access door removably mounted to the chassis, the access door suitable for permitting access to an electronic component contained in the computer chassis, and a release mechanism adjacent to the access door, wherein the release mechanism is manually operable by a single hand of a user to release the access door from the chassis, the access door separating from the chassis upon manipulation of the release mechanism by the user. The quick release mechanism is preferably a squeezable handle. EMI shielding is accomplished through EMI clips.
